WROCLOVE OPEN DAY

18 MAY 2023

During your visit, we will show you how new software is created in practice on large international IT projects and what we do in our company to make this work as effective and fascinating as possible.

Time	Session	Speaker
09:30 - 10:30	**Experienced junior – a paradox or realistic wish for IT companies?** You will learn during this lecture how to have 20 years of professional experience at the age of 20. The speaker (an experienced developer) is going to answer the following questions: • How to prepare appropriately for a recruitment interview? • What catches the recruiter's attention in a programmer's CV? • (Non)professional experience - what really counts? • "All questions I should ask during an interview"	Cyril Junior Dim
10:45 - 12:00	**I didn't become a programmer to talk to people. What does the whole development process actually look like?** Programming is a business like any other and being a good programmer is more than just strong programming skills. You need to understand your customer, what he needs, how to provide the code, and lastly make sure the client is highly satisfied. We'll look more closely at the professional development process and what to expect in real-life coding.	Mateusz Lenczewski
12:00 - 13:00	**PIZZA**	
13:00- 14:00	**Git – basic skill at work, invisible at university.** Why isn't the most basic tool for developers taught at universities? Have you ever wondered? We have! That's why we have a solution. During these optimally practical workshops, you will learn what GIT is, how to use it, and how to keep your repository clean and organized. Sollers' developers will talk about enhancing your private repo and learning about the client's one. This will be a big boost for your ongoing or future career	Szymon Jóźwicki
14:15- 15:15	**What if Java is not enough? A programing language is only a tool.** What programming language will get me a job, Top 10 Highest Paying Programming Languages, Best programming language to learn. These statements are increasingly popular in the Google browser. Obviously, there is more than one correct answer and more than Java one technology. ☺ We will shortly go over different concepts for programming languages, their features, and usage. We'll also talk about Guidewire and confront opinions of the Gosu language with reality.	Małgorzata Orłowska-Szczechla
